PRODUCTS AND SOLUTIONS IN THE CLOUD:

CLLOUD SERVERS

Every cloud has a silver lining. Ours happens to be the Windows® platform we created after months of working with Microsoft® and deploying it on Dell™ Enterprise blade and SAN infrastructure. Our cloud servers are more scalable than ever with high availability included in every option.

EXCHANGE, SHAREPOINT® & LYNC™

We offer the latest in Microsoft® collaboration and productivity in the cloud, but we do things a little differently. Not only is our platform more flexible, but our experience hosting Windows® applications is practically unparalleled. Take a look at how we offer Microsoft® Lync™ – it's priced to make sense for your client and is truly a complete phone system replacement. Enterhost is a pioneer in offering Lync's™ full feature set in the cloud, something you won't find anywhere else.

APPLICATIONS

We don't just have our head in the clouds; we have a lot of applications there too. As clients ask for advice on moving applications to the cloud, you need a compatible cloud platform. No matter the type of application, if a client runs it on-premise on Windows®, we can host it on our cloud.

LET'S TALK.

SHARED WEB HOSTING

Exclusively for Channel Partners, Enterhost offers premium shared web hosting services in the cloud, access to our SSL certificate, and domain name registration services.

PRIVATE AND SEMI PRIVATE CLOUD

Whether you prefer VMware® or Hyper V™, we can put you on cloud nine with your own private or hybrid cloud solution. We've put in the time so you don't have to reinvent the wheel. We know clouds, so let us build one for you.

LEGACY OFFERINGS:

DEDICATED SERVERS

Not every client is ready to migrate to the cloud. If your client needs dedicated hardware and performance now, with the option to migrate to the cloud later, then our dedicated servers are the right choice. We have a long proven track record in dedicated hosting; with zero-downtime migration to the cloud, your decision is future proof.

DISASTER RECOVERY

Every business needs a disaster recovery solution. We mean that sincerely, not just as a sales technique. To show you how much we mean it, we will build a solution that is both reliable and affordable, whether you simply need to replicate data to our facility or require a full disaster recovery plan standing up virtual machines.

PROFESSIONAL SERVICES

Over the years, clients have asked us if our Windows® Specialists could be hired on a project basis. Now exclusively for Channel Partners, you can leverage the depth of our team to advise, develop, and implement solutions for your clients. Whether the project is hosted in our data center or on your client's premise, we can provide full service and support.
